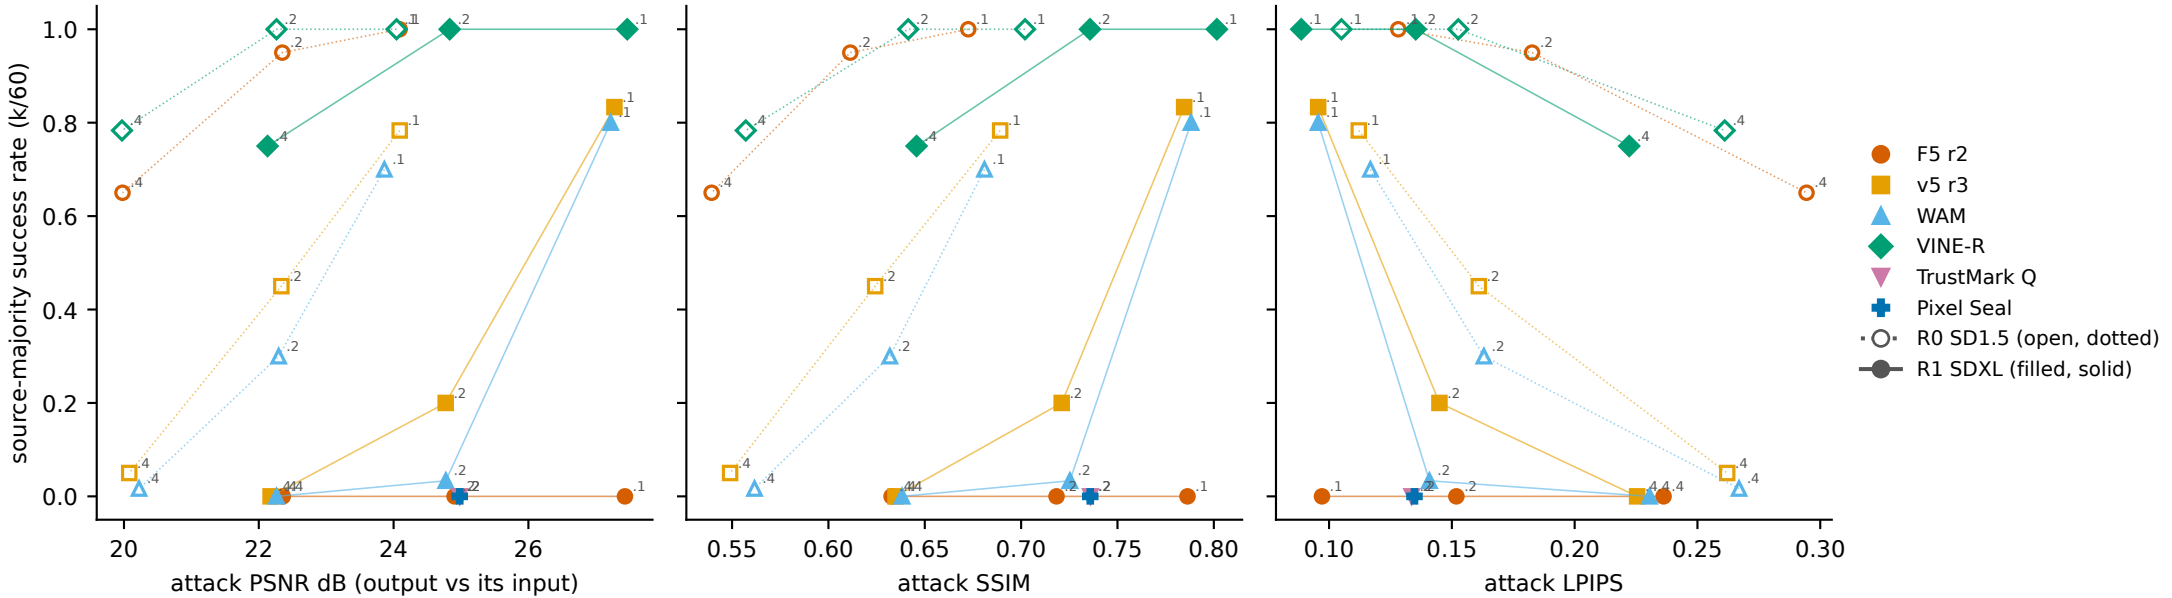
Figure 2. Robustness against achieved attack distortion (median over sources of within-source seed medians); segments join measured strengths, no interpolation



Point labels give the strength. Quality sources with three complete seeds: R0 SD1.5 .1 59–60/60; R0 SD1.5 .2 58–59/60; R0 SD1.5 .4 58–59/60; R1 SDXL .1 60/60; R1 SDXL .2 60/60; R1 SDXL .4 60/60. Success counts all 60 sources (blocked = failure).
